

Improve Patient Care with Remote Monitoring Solutions

In Jan 2020, Medicare increased reimbursements for Remote Patient Monitoring from \$ 59/month to \$130 /month per patient.

It has made this increase because research shows that RPM can improve outcomes, reduce readmissions and reduce the overall healthcare costs even while providers are paid to monitor their patients. Remote patient monitoring (RPM) has been shown to reduce hospital readmissions by 76% and increase patient satisfaction by over 90%

You are busy enough already, we handle everything.

Of course, the challenge is adding the processes and resources to effectively contact patients regularly, collect data, analyze it and provide the necessary reports to Medicare for reimbursement. We handle it all providing you the results and alerting you to any patient issues that deserve immediate attention.

Increase your productivity and revenue.

You will have critical patient information at your fingertips and be able to serve them more efficiently. You earn additional revenue from the monitoring service we perform on your behalf. On the following page are expected enhanced reimbursements for your practice.

\$1.5MM ↑
Reimbursements

A 1,000 patient practice could net an additional \$1.5 million in reimbursements by adding remote monitoring solutions from Augment Health

Advanced monitoring technology

Augment health uses the latest technology available in the market to monitor patients at home including cellular enabled blood pressure monitors, glucose monitors, pulse oximeters, and weight scales, just to name a few (see following page for examples).

Augment Health Technology

The RPM program has allowed me to take care of my patient population very effectively during the pandemic. The practice revenue has increased to 2X within first 6 months of on-boarding RPM program. Dr. Deepak L (Chicago)

30% of my patient population Blood pressure came under control within first 30 days of RPM program as I was able to monitor their charts on regular basis and intervene very effectively. I am confident that within next 3-4 months greater than 80% of my patients will show stable blood pressure. Dr. Robert R (Chicago)

The RPM of Augment Health has allowed me to take smart decisions and got me into good discipline of exercise and good eating habits. Patient Bill H (Kentucky)

I feel like Augment health team has taken personal interest in my well being. They did a great job in getting me on-board, helping me with device set up. I also get an alert anytime I do not take my blood pressure reading for more than 3 days. Patient Mark S (Libertyville)

Augment Health Devices using latest cellular technology

When a patient receives a AHT Blood Pressure Cuff, it's fully configured and ready to use out of the box — no smartphone, app, Bluetooth, or WiFi required. The device automatically streams data to the practice with no user intervention.

Remotely measure patient glucose levels with AHT Blood Glucose Monitor. Get clinical information at-a-glance in our practitioner portal and make better decisions based on comprehensive and continuous patient glucose level data.

Keep track of your patients' weight remotely with the AHT Digital Weight Scale. The smart scale enables practitioners to remotely monitor crucial changes in patient mass providing insights that are critical for patients with congestive heart problems and Obesity

Stay connected to your patients' wellbeing with clear, continuous, and accurate data. Keep track of your patients' heart rate remotely with the AHT Pulse Ox. The device is ready to use and does not need any smartphone, app, Bluetooth or WIFI
